Room booking

How to set-up room booking in your local machine (laptop or desktop)

1.) Install postgresql and pgAdmin.
Setup pgAdmin and create a new database

2.) Clone room booking repo from GitHub to your local device(laptop or desktop). In which there are two folder frontend and backend
[if you don't have code this step require]

3.) Open room booking folder with vs code. In which there are two folder frontend and backend

4.) Create .env file in backend folder and add environment variables in this file

5.) Open vs code terminal and type command   cd ./backend/
Now type command   node server
It will start backend server
(for eg. http://localhost:5000)

6.) Open login.html, signup.html, app.js and admin.js and change base url with your backend localhost url
(for eg. http://localhost:5000)

7.) Open index.html file from frontend folder in same vs code. Now if you have live server vs code extension installed then click on "go live".
If this live server not installed then install it first. It will create a localhost server for frontend
